

Bioway MULTI

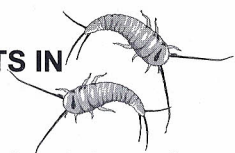

Insect and Dustmite KILLER

COLD-BLOODED INSECTS AND PYRETHROIDS

Because of their nervous tracts and systems, insects easily come into contact with Pyrethroid substances. The Permethrin and Bioallethrin molecules are quickly absorbed by them, it penetrates their nervous system, causing certain death. The product kills insects, their larvae and eggs. The neurotoxicity caused by this product in insects interferes with their host seeking and biting behaviour at very low concentrations.

FISHMOTHS AND OTHER INSECTS IN CLOTHING AND BEDDING

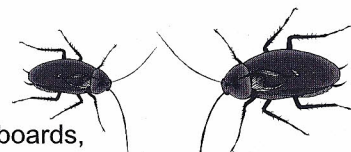

- * Spray the shelves, drawers and insides of wardrobes and cupboards.
- * Spray clothing, blankets, linen, etc. Use only a small amount - no need to moisten the material. Repeat every 3-4 weeks.
- * Permethrin can give up to 4 months protection in stored clothing and other items.

ANTS AND OTHER CRAWLING INSECTS

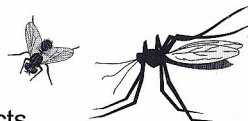

- * Spray directly onto the insects.
- * Spray surfaces properly where insects appear.
- * Repeat when insects re-appear.

COCKROACHES

Spray properly inside cupboards, shelves and other places and areas where insects appear or hide. Repeat often until insects are under control.

FLIES AND MOSQUITOS

- * Spray directly onto the insects.
- * Spray mosquito-nets, walls and other areas where insects hide.
- * Spray rubbish bins, garbage bags, or anything that attracts flies.
- * Lure flies to sprayed or treated waste or rubbish, like fruit peels, used meat packagings, etc.
- * Place in areas where flies can easily be attracted.

BAGGAGE AND CLOTHING AT ARRIVAL

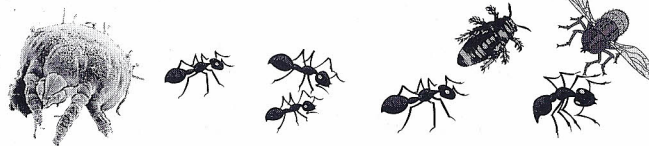

Bioway Multi Insect and Dustmite Killer can be provided with total peace of mind to guests and visitors on arrival to prevent the spreading of biting insects. The product is odourless - does not stain, no synthetic solvents and no unpleasant fumes are released.

Spray kennels, your pet's bedding, bird cages, nests, stables and around feed and water troughs. The use of Permethrin and Bioallethrin has not been shown to be toxic to birds.

Can be used on flowers, plants and in the garden for insect control.

Always take your Bioway Multi Insect and Dustmite Killer with when travelling - camping - hiking - at a braai or picnic, etc.

BIOWAY MULTI INSECT AND DUSTMITE KILLER SAFETY DATA SHEET (TECHNICAL)

Micro-emulsified Permethrin and Bioallethrin

- * Water based - white milky liquid
- * Typical odourless once applied
- * Synthetic solvents used in solution - none

- * Skin contact...
- * Absorption - negligible
- * Irritation caused - none
- * Sensitizer - none
- * Allergies (rash) - none
- * Colouring - none

RINSE WITH CLEAN WATER AFTER CONTACT

- * Contact with eyes... Irritation - none
- * Sensitizer - none

RINSE WITH CLEAN WATER AFTER CONTACT

- * Contact with tongue - slight prickling sensation
- RINSE WITH CLEAN WATER AFTER CONTACT*

- * Accidental swallowing... - No significant negative related experiences or reactions reported in 15 years.

- * Solubility - complete into waterbased micro emulsion
 - * Shelf-life - Two (2) years
 - * Harmful fumes or gasses released - none
 - * Thermal decomposition - none
 - * Dangerous decomposition products - none
 - * Dangerous reactions - none
 - * Not dangerous when stored with other products
 - * No changes in state up to 60° celcius.
 - * PH value - Neutral
- 100% Biodegradable - not residual in environment

- * Not dangerous or hazardous for public when displayed for retail.
- * Not dangerous within the meaning of transport regulations.
- * Not a dangerous preparation with its specific characteristics within the meaning of the regulations on dangerous goods of 26/08/1986.
