Smart Blinds for Smart Living Supertrax is a company that specialises in controlling the sun through an extensive range of window coverings. We supply Roller Blinds and other Sun Screens as well as Curtain Automation. We have been in the business since 2002, during which time we have established ourselves as a knowledgeable service driven company with an outstanding range of products and a reputation of service excellence that does justice to our products. Our systems are compatible with all major home-automation systems. In addition, we also offer all forms of manual blinds, venetians, pleated, verticals etc. Our Products Motorised Roller Blinds From functional to fashionable – this is the way roller blinds have developed over the years. Initially appreciated for their excellent shading qualities, now their unobtrusiveness and easy operation has made them a favourite with interior designers and home owners. Their simple clean lines are the perfect complement to modern architecture. Not only do they offer sun protection and privacy, they add to the ambience of the room. Application Available in free-hanging or guided application Internal or external fitment Horizontal or vertical installation Mains operated, low voltage or battery operated options Switch via DCT wall-switch, RF remote control or Home automation system Available in a variety of fabrics and

colours Visually appealing due to unobtrusive mechanism Offers varying degrees of sun control whilst preserving views, or total block out From 800mm - 5000mm

Application Silent and smooth chain operated roller blind system for residential and contract applications Effortless and elegant operation with stainless steel bead chain Blind can be stopped at any given position Easy ceiling, wall or recess fix Side guide option available Choice of bottom bar designs Q-Motion Shades A variety of

External Roller Blind Systems are available. Specifically designed for building facades and vast glazed areas, these roller sunscreens are very elegant but also wind resistant. Because external blinds prevent direct sunlight from reaching the glass, they are very effective in reducing heat and glare. Due to the superior sun protection they offer – coupled to their modern look – they are popular in domestic applications too. Installed externally, solar protection systems offer optimum performance in terms of thermal comfort.

They are designed to ensure ever greater protection from heat and sunlight for buildings and their occupants. They constitute a genuine heat shield, which contributes to preserving a constant internal ambient temperature, whilst considerably enhancing its quality of life and internal atmosphere. They therefore enable you to reduce energy and operating costs. They boast textiles specifically designed to offer dimensional stability and unmatched resistance to the weather,

UV radiation and tearing. Application Aesthetically pleasing Extensive range of fabrics

in terms of Solar Protection and Colour

Motorised with wind sensor to protect against strong wind

Uses sturdy guide cables, side channels or the unique ShyZip side channel guide system

Available with or without cover boxes

Can be transparent to varying degrees, opaque or block-out

Very sturdy and well engineered design transforms blind into becoming a part of the building

Reduces energy consumption

External Blinds

Motorised Curtain Rails

Curtains are a timeless and stylish window covering that will complement any home. Large windows and glazed areas are more popular than ever. For these and difficult to reach windows, motorised curtain rails are the perfect solution. By automating your curtains, you are adding another element – beautiful and controlled movement. Automation also protects your curtains from damage and dirt caused by manually handling them.

Application

Range of models available depending on the size of the window and the weight of the

curtainsCan be controlled by wall switch, remote control or home automation systemWidest range of the most efficient and reliable systems purpose designed for homes, conference rooms, hotels, stages and auditoriumsManual override in some models – curtains can be operated by hand during power failuresTouch motion in some models – a gentle pull on the fabric will activate the blind to start moving automaticallyCan be curved to almost any contourCompletely silent operation with soft start and stopCan open curtains from the left or right sides or from the centreAvailable in 'wave' curtain heading system or normal pleated options
