and fittings, for more quality assurance.All domestic storage solutions
Your one-stop-shop for kitchens, built-in cupboards, vanities, studies and

bars. KITCHEN CARE – ESSENTIALS We’ve compiled care and maintenance guidelines to ensure your kitchen is pristine and a proud centre point of your home. help you keep your kitchen looking fantastic. Impact melamine and thermo-foil wrap doors and panelsTo clean, use only a mild soapy solution. Wipe down with a damp cloth and dry with a soft cloth. Dust with a soft cloth only. Don’t use wax-furniture polish or any cleaning products that contain alcohol or solvents. Don’t use abrasive cleaners, acetone, petrol or glass cleaners as this will damage the surface of the doors. Cooking splashes should be wiped up immediately using a damp cloth. Use a micro fibre anti-scratch cloth. Hi-gloss doors and panelsClean with a damp, soft cloth such as a micro-fibre anti-scratch cloth. Wipe dry after cleaning. Don’t use any cleaning products containing alcohol or solvents. Don’t use abrasive cleaners, acetone, petrol or glass cleaners as this will damage the surface of the doors.Solid wood, veneers and Painted doors and panelsUse a micro fibre anti-scratch cloth when cleaning and use a very mild soapy solution. Wipe down with a damp cloth and dry with a soft clean cloth. Dust with a soft cloth only, following the grain pattern of the wood. Don’t use cleaning products that contain alcohol or solvents. Don’t use abrasive cleaners, acetone, petrol or glass cleaners as this will damage the surface of the doors. It’s best to use a damp cloth to remove fingerprints and marks, followed by drying with a soft cloth. Cooking splashes should be wiped up immediately using a damp cloth. You may be aware that wood changes colour when exposed to light; the rate of change being dependent on the species and intensity of exposure. Please be aware that if additional doors are required in the future, a variation in colour is highly probable.Work surfacesYour work surfaces can become damaged if mistreated. We would recommend that you:Always use a chopping board.Place hot pans or casserole dishes on protective mats or trivets.Mop up spills immediately, particularly on joins and around sink and hob cut-out areas.Laminated work surfacesWipe clean with a moist cloth and mild detergent. For more stubborn marks, leave the detergent to soak for a short while before rinsing thoroughly.Solid WoodAlways mop up spills straight away and don’t leave wet crockery to stand for any length of time on solid wood surfaces. Attention should be paid to the sink area where water gathers. Wipe water up to avoid damage. Make sure the surfaces don’t

have prolonged contact with metals, such as iron and steel, as these can cause black staining of the timber. Wipe clean using a well wrung out cloth dipped in warm soapy water. Solid wood work surfaces require slightly more maintenance than other tops as they need to be oiled regularly. We recommend using Danish oil to keep the wood supple and prevent cracking. Always follow the grain when applying oil and use a soft dry cloth.Granite and composite surfacesStone work surfaces are pre-treated with a liquid silicone sealer which reduces their natural porosity and provides a protective coating. Clean with water containing soap or a mild or neutral detergent using a soft cloth or sponge. Rinse off with clean water.Polish dry with a soft cloth or a micro-fibre surface cloth. Avoid use of abrasive cleaning materials including scouring powders, steel wool or metal brushes.Never use bleach and other chlorine-based cleaners, acids, photographic development liquid, alkalis (caustic soda) and concentrated disinfectants on stone surfaces.Solid SurfacesUse soapy water, ammonia-based cleaners (not window cleaners as they can leave a waxy build up that may dull the surface) or commercially available solid surface cleaners. These will remove most dirt and residue from all types of finishes although stubborn residue will require a little stronger cleaner.To avoid water marks, clean up spills before they dry.To disinfect, wipe surfaces with very diluted household bleach.If any handles or knobs are loose they should be tightened with a screwdriver. If any are broken they should be replaced since they can not only be unsightly but hazardous as well.Cabinet door hinges should be checked regularly for signs of wear, especially if the door is not closing properly. The hinges may be tightened with a screwdriver and may be replaced if they are excessively worn.These small steps can allow your kitchen cabinet doors to maintain their functionality and appearance over many years.Stainless SteelFor general cleaning, only use a 5% liquid soap and 95% water solution. Wipe down with a damp cloth (not wet) and dry with a soft clean cloth, or alternatively use a stainless steel cleaner such as ‘Inox crème’. Dust with a soft clean cloth only. Don’t use cleaning products that contain alcohol or solvents. Don’t use abrasive cleaners, acetone, petrol or glass cleaners as this will damage the surface. Use a micro fibre anti-scratch cloth when cleaning. A light coat of baby oil

can be used to enhance the appearance if required. It makes it look, and stay, looking fantastic. There are various aerosol stainless steel cleaners on the market that can be used.KITCHEN DESIGNEvolution, which was developed by Easylife Kitchens over the past two years, introduces stylish, state-of-the-art new kitchen designs based on European trends and the latest in kitchen design technology. The new designs are being manufactured at Easylife Kitchens' manufacturing plants in Johannesburg and Cape Town.Easylife Kitchens Managing Director, Philip Kirby, says the introduction of Evolution is the biggest change to the company's product offering in 10 years, and required significant changes to its production processes."We are delighted to bring this new product to market. We are the first local manufacturer to produce these kitchens in high volume and are confident our customers will love the new design and additional space created. And at the same time as introducing Evolution, we've introduced a national pricing model ensuring that no-matter where our customers buy our products, they pay the same price."Evolution covers every aspect of the modern kitchen, providing the perfect combination of space and technology to maximise efficient workflow. In creating Evolution, the company has moved away from what has historically been the standard industry carcass sizes for kitchens in South Africa, instead creating a product that better meets its customer's needs.Key features and benefits of the new design include:Evolution kitchen designs offer spectacular space-saving benefits.Designers can do much more in terms of drawer configuration. A new six-tier drawer system has been introduced as a design option, effectively increasing drawer space by 50%.All drawer frontals line up enabling a handle-less design.Wall units have 10% more cabinet depth. Now at a depth of 330mm vs the standard 300mm generally available in South Africa, there is ample depth to store dinner plates and recipe books making the units much more practical.In a home office application, lever arch files will fit comfortably in the deeper wall units.A smaller plinth of 80mm has been used in the floor units, down from 150mm, creating 10% more space inside the cabinets, which has increased the interior space by 70mm.The revolutionary new design also provides increased ventilation for oven and fridge units.With the wall units being 330mm deep, all wall-unit lift systems can

now be accommodated.Philip adds that Easylife Kitchens' Design Consultants have all been trained on Evolution, giving them an opportunity to follow European design trends and create designs that compete with the best of Europe's kitchen designers.EASYLIFE GUARANTEE CERTIFICATE (CLICK TO VIEW)PROFESSIONAL CONSULTATION FEEOur professionally trained Design Consultants will prepare the design & quotation to your requirements using the most up to date design technology currently available.Our Design Consultants spend a lot of time on your design to ensure that it is professional, accurate and according to your needs.The Easylife Kitchens Consultation Fee of R450 covers consultations and site visits required to finalise your quotation for your dream kitchen.Kindly note that this consultation fee will be credited to your account once you decide to accept our quotation and pay the deposit.The consultation fee is for the quotation only and does not include the itemised quote, the plans or the design, which will be supplied when the quotation is accepted and the deposit is received.Assuring you of our best intentions at all times.QUALITY GUARANTEEDQUALITY ADVANTAGEAt Easylife Kitchens we are proud of our seal of quality which carries a two-year product and workmanship guarantee. Our customers are assured of total peace of mind, secure in the knowledge that they are investing in a kitchen which has been designed in accordance with the latest computer-aided technology and manufactured to the highest quality standards, using only first-grade materials and components.LegsWe use imported virgin plastic adjustable carcass legs to ensure that the kitchen is protected from any possible flood damage.Sink basesImported aluminium trays are used to protect the kitchen cupboard under the sink from plumbing leaks.Aluminium worktop support brace for sinkImported aluminium sink support braces are used to strengthen the worktop when a cut-out is made for a sink, which is usually positioned close to the edge of the worktop.Pre-drilling of holes on CNCSpecialised machines are used for pre-drilling holes to ensure accuracy, as well as minimising the handling of each component and for greater ease of assembly.Hinges with a lifetime guaranteeWe use only Blum hinges, renowned for their high technology, outstanding quality and durability, with the additional option of selfor soft-closing cabinet doors.Drawers with a lifetime guaranteeOnly Blum drawer systems are

used, because of their unsurpassed, silent runners and effortless closing properties.Metal-sided drawersOnly Blum single drawer side systems are used, known for their high side stability and low sag values, instead of the wooden box option generally available on the market.16mm drawer basesThese bases ensure strong, sturdy drawers that will withstand warping. In addition, as there is no grooving on the base, the carrying capacity of the drawers is increased.Soft-closing and handle-less optionAs an alternative to normal drawer systems, we can upgrade your kitchen design to an integrated Blumotion soft-closing solution or even the further option of a handle-less kitchen.Adjustable shelves with pre-drilled holesThis manufacturing system allows our customers to choose their preferred location of shelves, together with the option of adding extra shelves.Pre-assemble each cupboardIn this way we ensure that the quality of each cupboard carcass is to standard, that all components required are in the flat pack (including hardware for assembly), and that everything is in place for final assembly on site.A-grade boardOnly A-grade board is used in manufacture, which ensures that there are no colour variances in the Melamine, and that the quality of the board meets all industry standards regarding density of substrate and glue content.Hot-melt glue and state-of-the-art edge banding technologyThis methodology provides for minimal visibility of the glue line and ensures long-lasting, smooth edging on all componentsTRADE PARTNERS (CLICK HERE FOR MORE INFORMATION)
