Industrial X-ray and CT SolutionsX-Sight X-ray Services provides high resolution 3D computed tomography (CT) inspection services to all research and industry sectors, and supplies and supports x-ray CT inspection systems and equipment for quality control, research, and failure analysis.

X-Sight represents the world's most complete solution in digital real time x-ray imaging for R&D and industrial applications. With our extensive range of technology, intellectual property, know-how and products we are able to provide diverse solutions within a wide range of industries including: electronics, pharmaceutical, aerospace, automotive, ordnance, agricultural, mining and many more.

We provide systems that vary in size from small cabinet units to walk-in laboratories. We can offer the broadest range of nano/microfocal x-ray sources including rotating anode, transmission and reflection targets of various materials, with penetration from 30kV to 750kV. Our computed tomography (CT) systems have been used to create 3D images from the smallest area within a microchip to an ancient astronomical calculating machine. If you have an application we have the technology.
