Full Time NQF7 At the Stellenbosch Academy, we understand how difficult it can be to choose a career path that is both rewarding and aligned with one's natural skills and interests. That is why we have designed a curriculum that moves from the general to the specific. It allows our students to get a taste of the five major disciplines we offer (Design, Photography, Art Direction, Illustration and Multimedia Studies) before deciding on a specialisation.In the first six months of first year, students get a taste of all five major disciplines. In the second six months of first year, students choose two of these disciplines to explore further. At the beginning of second year they then choose one major from the previous two - taking it through to completion at the end of third year. This ensures a solid grounding in visual communication and a major that plays to individual students' skills and interests.Full Time NQF5Our higher certificate programme in commercial photography gives students everything they need for entry-level photographic practice. This means our graduates leave with a solid grounding in photography that allows them to hit the ground running.The programme covers a range of styles including: Advertising, portraiture, landscape and documentary photography.
