Somerset Timbers is a leading manufacturer, treater and supplier of structural pine, mouldings, hardwood decking, ply board, poles and fasteners. **SABS STRUCTURAL TIMBER** We stock a full range of SABS structural timber. We normally have 350 cubic metres in stock allowing quick supply and strive to stock all standard lengths. Our on site processing facilities enable a range of treatments for specific uses and our Production department provides planing and profiling services. Our stocks also include related items such as fascia, valley boards and capping. **POLE MANUFACTURING** We manufacture a wide range of pine poles from Agricultural poles, laths and droppers to specialist slabbed poles and bollards. Our poles are used for fencing, vineyards, landscaping, pergolas, roofs and trusses. We offer our poles in various treatments and finishes depending on customer requirements. **SABS TIMBER TREATMENT** Our Treatment department houses 2 different SABS Registered plants. 1. CCA: This widely used water based treatment imparts a light green colour to the timber and is the industry standard for structural timber, poles and fencing. 2. TBTN: A spirits based treatment designed for protection of machined timber where dimensional stability and a clear colour is required.
