We are passionate about equipping people with information that will move them from frustration behind the computer to “Yes, I can do this!” Simply put, we are about simplifying! Bit by bit The services we offer include: Group training for your staff Online training Computer Assessments Personal training in the comfort of your home iSimplifi Group Training Having employees who know how to do things properly will make your company more efficient, cutting business IT support costs and streamlining business processes. Additionally, the right software training can reduce frustration and increase productivity amongst your staff. There’s nothing worse than wrestling with a computer to make it do what you want – especially when it might only take a brief training session to learn how to do it. We use Skills Lists to assess the IT skills your employees need before any training takes place. This allows us to zoom in on their specific needs. iSimplifi Online Training We experienced huge benefit from the Covid-19 Lockdown period as we were forced to take all our courses online. We can therefore now offer any course online to groups (maximum of 12 attendees) anywhere in the country, and even anywhere in the world. iSimplifi Personal Training We train clients behind their own computers on a one-on-one basis from basic to more advanced computer skills. Although we can do complete courses,

we prefer to zoom in on the client's specific needs. This allows us to give a client the best value for money. We provide the client with user friendly notes on everything that we teach so the client has something to refer back to. We also provide a telephonic service where, if they are busy with what we taught them, and they get stuck they can call us and one or two hints would sometimes be all they need to carry on. It would be great to assist you with training that will satisfy your specific needs. So feel free to give Debbie a call
