The best home Wireless available!Uncapped, un-throttled and you can shape your own service for best performance.Wireless Internet means you receive your Internet connectivity through a wireless CPE (Customer Premises Equipment) on your roof.This CPE points to our nearest tower to connect to the Internet and other services. Jenny Internet is the first ISP in South Africa to give their clients the power to shape their own lines and is designed specifically for home use. We provide you with a control panel that enables you to improve your connection even if the whole family is using it at the same time. Jenny Priority Flow allows you to prioritize either gaming, video treaming for Netflix or many more configurations to streamline your connection based on your specific needs.
