Get connected with Intense Fibre. Intense Fibre utilises unparalleled experience in state-of-the-art technologies along with dedicated personalised service to provide the most reliable and efficient telecom solutions possible. Powered by trusted service providers, we provide you with the best solutions for your home or business. Intense Fibre has a team of highly capable staff and engineers, and a product offering that helps to maximise clients' revenue, increases their operational efficiency, and improves their customers' satisfaction. Intense Fibre provides data, voice and other telecommunication services directly and through its agents in all major centres in South Africa. Established in 2004, we have a track record of providing customers with unparalleled service and dedication.

HOME USERS Need to connect your home? Check out the mix of capped and uncapped options we have for you. Intense Fibre offers a range of ways to get your home connected – from Mobile and Wireless offerings, to fixed line options like ADSL and Fibre. Read more below to find out which is for you, or simply talk to us.

Wireless With speeds of up to 10Mbps, our uncapped Wireless offerings are similar to ADSL, except that your connection to Internet is through a wireless antenna installed at your home. This makes it ideal for locations where ADSL is unavailable.

Fibre If it's a fast Internet connection you're after, almost nothing beats fibre. With capped and uncapped options of up to 100Mbps, buffering is finally a thing of the past, and your home more than ready for the connected future.

Intense Fibre can also connect you

to a range of 3G and LTE capable networks, giving you the freedom to move around while staying connected to your world.

ADSL Our capped and uncapped ADSL options represent a perfect balance between speed and cost, making it ideal for everyday home users. For more demanding Internet users, we also offer VDSL services of up to 40Mbps.

BUSINESS USERS Connect your business with the right package to help you get the job done. Because we understand the importance of having a connected business, Intense Broadband offers a range of technologies to suit your Internet needs – whether a small business or large enterprise. **Fibre** Fibre means business! If speed is what your operation needs to run smoothly, then fibre is for you. With capped and uncapped options of up to 100Mbps, you can now serve your customers at lightning speed.

ADSL Most businesses still rely on ADSL to stay connected to the outside world. Intense Broadband offers both capped and uncapped ADSL solutions of up to 10Mbps, as well as VDSL at speeds of up to 40Mbps.

Wireless As an alternative to ADSL, Intense Broadband offers capped Wireless DSL packages for small to medium-sized businesses. For larger enterprises, our wireless Metronet offering with speeds of up to 155Mbps is ideal.
